Healthy skin - full viewer

Website setup and sharing guide. This package contains one full interactive Three.js/WebGL viewer and a PNG rotation backup of the latest model.

For client review without installation, use the separate **Client_Browser_Preview_V3.zip**. This guide covers website installation. Open START_HERE.html in the browser preview package. No website is needed for that review.

1. Upload to your website

Extract **Healthy_Full_V3.zip**. Upload the complete **Healthy_Full_V3** folder into your website, keeping the filenames and folder structure intact. No website build step, CDN or external model service is needed.

The viewer will be available at a URL such as:
https://your-website.com/skin/Healthy_Full_V3/index.html

2. Embed in an existing page

Ask your website developer to paste the following into an HTML block. Change the path if the folder is uploaded somewhere else. Full-screen permission must remain enabled.

```
<iframe
  src="/skin/Healthy_Full_V3/index.html"
  title="Healthy skin interactive illustration"
  style="width:100%;height:1000px;border:0;display:block"
  allow="fullscreen" allowfullscreen>
</iframe>
```

Use a height of at least 900px on small screens so the controls and labels have enough space. The iframe width follows its parent page. The viewer can also be opened directly using its own URL.

3. Check before sharing

Wait for **3D model ready**. Check rotation, zoom, Feel / Function / Layers labels, lighting, and full-screen entry and exit. The illustration disclaimer should remain visible. Test in a current desktop browser and on the target mobile devices.

The host must serve JavaScript as JavaScript, JSON as JSON, GLB as model/gltf-binary or application/octet-stream, and WASM as application/wasm. Keep all assets on the same host. If your website has a restrictive security policy, your developer must allow the local module files and inline import map.

Preview, backups and sharing

Developer local preview on Windows

Extract the ZIP first. Install Python 3 if it is not already available, with Python added to PATH. Double-click **START_PREVIEW.cmd** inside the extracted folder. Open **http://127.0.0.1:8000/** in your browser. Keep the command window open while viewing; press Ctrl+C when finished. Preview one package at a time on this port.

Developer local preview on a Mac

The viewer runs in current browsers on Mac as well as Windows. For local preview, open Terminal in the extracted package folder and, with Python 3 installed, run:

```
python3 -m http.server 8000 --bind 127.0.0.1
```

Then open **http://127.0.0.1:8000/**. Opening index.html directly from Finder or File Explorer is not supported for these website folders. No Python or command file is needed after the viewer is uploaded to a website.

PNG rotation backup

PNG_Backup contains 120 transparent PNG images at 1200 x 1200 pixels, numbered **frame-000.png** to **frame-119.png**. The views cover a complete 360-degree rotation in 3-degree steps; the first frame is not repeated at the end. Composite over white or a page background.

These are model-only, offline-rendered backup assets. Labels and controls remain live HTML in the viewer; they are not baked into the PNGs. Lighting can differ slightly from browser rendering. A developer can use these images for a poster or build a separate image-sequence fallback. The PNG folder is not required by the Three.js viewer and can be omitted from the website upload.

What to send to the client

For client review, send **Client_Browser_Preview_V3.zip**. Ask the recipient to download and extract it, then open START_HERE.html. No installation or server is needed. Give **Healthy_Full_V3.zip** and this guide to the website developer for installation. Use Dropbox or another download link for the ZIPs.

Required website files

index.html is the page; **assets** contains the model with embedded textures; **viewer** contains the interface, labels and movement; **vendor** contains the local Three.js dependencies and required licences. The PDF, preview command and PNG_Backup are handover aids and do not need to be uploaded.
